

Next Generation - NG6 Double Cut Burs

Featuring patent-pending geometry and Accelerator-P coating for aggressive stock removal, extended tool life, and high performance results.

The advanced geometry combines profiled fluting, low cross-cut, and primary relief—delivering more than twice the material removal rate of other leading double cut burs.

Features & Benefits

- More than twice the material removal rate of other market-leading double cut burs.
- Aggressive geometry improves cutting performance and reduces component machining time.
- Extended tool life and reduced operator grinding time.
- Reduced vibration, even in the most demanding grinding conditions.
- Available with **Accelerator-P** coating to boost stock removal and durability.
- For use on all types of steel up to 60 HRC, including mild steel and stainless (INOX).

Shapes Available

SA Shape
